

LECTURE-1 Adhoc & Sensor Networks

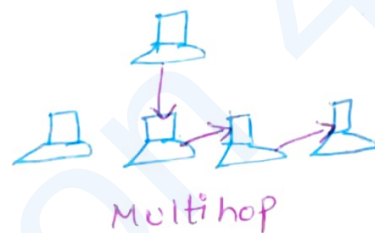

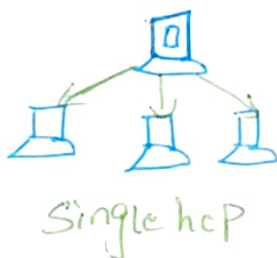

①

* They are 2 types of wireless N/w

1. Infrastructure N/w
 - Single hop :- ex :- Wifi
 - Multi hop :- ex :- GSM
2. Infrastructureless N/w
 - Single hop :- ex :- bluetooth
 - Multi hop :- ex :- Adhoc

In single hop, the sender directly sends the packet to the receiver without intermediate Node.

* In Multihop, the sender sends the packet to neighbours and then to receiver.

→ Infrastructure N/w means there is an intermediate component where coming to Infrastructureless N/w there is no intermediate component.
